Full Stack .NET Developer | ASP.NET Core | Angular | Cairo, Egypt

EXPERIENCE

Accreditation Pioneer International (API)

Nov. 2025 – Present

Full Stack .NET Developer

Sheraton, Cairo, Egypt

- Contributing to a Hospital Information System (HIS) handling medical, administrative, and financial workflows
- Developing and maintaining ASP.NET Web Forms and .NET Core modules for enterprise healthcare operations
- Building and integrating REST APIs and SOAP services across multiple system components
- Implementing business logic using C#, Entity Framework Core, LINQ, and ADO.NET
- Writing optimized SQL Server queries for reporting, data processing, and system performance improvements
- Debugging and enhancing legacy systems to improve stability, maintainability, and overall reliability
- Working within an N-Tier (Layered) Architecture and applying Dependency Injection across HIS modules

TECHNICAL SKILLS

Languages: C#, JavaScript, SQL

Frontend: Angular (API integration, component-based development), HTML, CSS, jQuery

Backend: ASP.NET Core, ASP.NET Web API, REST APIs, SOAP Services, Entity Framework Core, LINQ, ADO.NET

Architecture & Patterns: Clean Architecture, Layered (N-Tier) Architecture, Repository Pattern, Dependency Injection

Database & Tools: SQL Server, SQLite, Git, TFS, Swagger, SSMS, Visual Studio

PROJECTS

Repair Shop Management System | *Delivered Project*

- Designed and developed a desktop system to manage repair shop operations and workflows
- Translated real business requirements into technical features, relational data models, and application logic
- Implemented user and role management, invoicing, and reporting functionalities
- Owned the full development lifecycle including requirements analysis, development, debugging, and iterative enhancements
- Tech Stack:** C#, Avalonia UI, MVVM, Dapper, SQLite

E-Commerce Platform

- Developed a role-based e-commerce platform using ASP.NET Core Web API and Entity Framework Core
- Implemented JWT authentication and role-based authorization for Admin and Customer workflows
- Designed RESTful APIs for product management, authentication, and customer operations
- Applied Clean Architecture principles, Repository Pattern, and Dependency Injection to improve maintainability and scalability
- Tech Stack:** ASP.NET Core, Entity Framework Core, SQL Server, JWT, Clean Architecture

EDUCATION

El Shorouk Academy

Sep. 2019 – Jul. 2023

Bachelor's Degree in Computer Science

Cairo, Egypt

TRAINING

Information Technology Institute (ITI)

Aug. 2025

Full Stack Web Development Using .NET- Intensive Training Program

Egypt
